Metal finishes

Metal-only finish studies using the Cheburashka design. AI-edited Cheburashka design illustrations for comparison, not factory proofs or calibrated swatches. Confirm appearance and construction in your sample.

Gold
Warm yellow metallic finish. A classic choice for bright outlines.

Brass
A muted yellow metal tone. Compare the sample beside gold.

Copper
A reddish metal tone that brings warmth to exposed metal.

Rose gold
A pink-toned metallic finish; review it beside your enamel colors.

Rainbow
Iridescent metal shifts color with angle and light. Expect variation.

Nickel
A cool neutral metallic finish. This name is not a nickel-free claim.

Black nickel
Reflective dark gunmetal; compare against opaque dyed black.

Dyed black
Opaque black treatment for bold outlines and strong color contrast.

Antique gold
Gold highlights with darker recesses. Supplier name: Anti-Gold.

Antique brass
Brass highlights with darker recesses. Supplier name: Anti-Brass.

Silver
Bright silver-colored finish. The finish name does not mean solid silver.

Chrome
A bright reflective finish; review reflections and contrast on a sample.

Matte, antique and two-tone finishes

Metal-only finish studies using the Cheburashka design. AI-edited Cheburashka design illustrations for comparison, not factory proofs or calibrated swatches. Confirm appearance and construction in your sample.

Matte gold
A softer sheen than polished gold. Texture affects the final appearance.

Antique copper
Copper highlights and dark recesses. Supplier name: Anti-Copper.

Antique silver
Light highlights and dark recesses. Supplier name: Anti-Silver.

Antique nickel
Gray highlights and dark recesses. Supplier name: Anti-Nickel.

Matte nickel
A subdued gray metallic appearance with reduced shine.

Matte silver
A light silver-colored finish with a softer surface sheen.

Gold + nickel
Two metal tones in one design. Specify which areas use each finish.

Gold + black nickel
Gold details contrast with dark metal. Mark the boundary on the proof.

Antique bronze
Warm bronze with darker recesses; confirmed as an additional option by PinPerfect.

Black plating with anti-rust coating is also available. Confirm coating coverage, appearance and care. Antique options may use the supplier name “Anti-”.

Special effects and moving details

AI-edited Cheburashka design illustrations for comparison, not factory proofs or calibrated swatches. Confirm appearance and construction in your sample.

Glow
Choose the glowing areas and review charged and uncharged sample photos. Ask about charging conditions and visible glow.

Glitter
Reflective particles within selected color areas. Specify the locations, particle look and coverage.

Moving / bobble
A separate element can move. Specify the mechanism, movement range and clearance; the illustrated dangling element is one concept.

UV printing
Printed detail can supplement metal and color areas. Mark printed artwork separately and review fine details at final size.

Temperature changing
Color responds to temperature. Confirm transition colors, response range and reversibility with the sample.

Pearl powder
A pearlescent sheen within the color. Review movement under light, since a flat color chip cannot show the effect.

Translucent color
Light passes through the color layer so underlying metal can influence its appearance. Review it in more than one light.

Stone detail
Add a stone-style embellishment. Confirm material, size, setting, position and attachment in the quotation.

Glitter chamber
A transparent chamber contains loose glitter. Confirm chamber shape, fill, sealing and how movement appears in the sample.

Attachments

AI-edited Cheburashka design illustrations for comparison, not factory proofs or calibrated swatches. Confirm appearance and construction in your sample.

Butterfly clutch
A metal squeeze-back for a short post. Confirm clutch finish and the number of posts.

Rubber clutch
A push-on rubber cap for a short post. Confirm color and fit.

Deluxe clutch
A locking-style metal cap. Confirm the exact release mechanism and how to remove it.

Jewelry clutch
A compact jewelry-style fastening. Confirm its dimensions and mechanism; supplier naming can vary.

Screw nut
A threaded post and matching nut. Specify post length for the intended fabric or mounting surface.

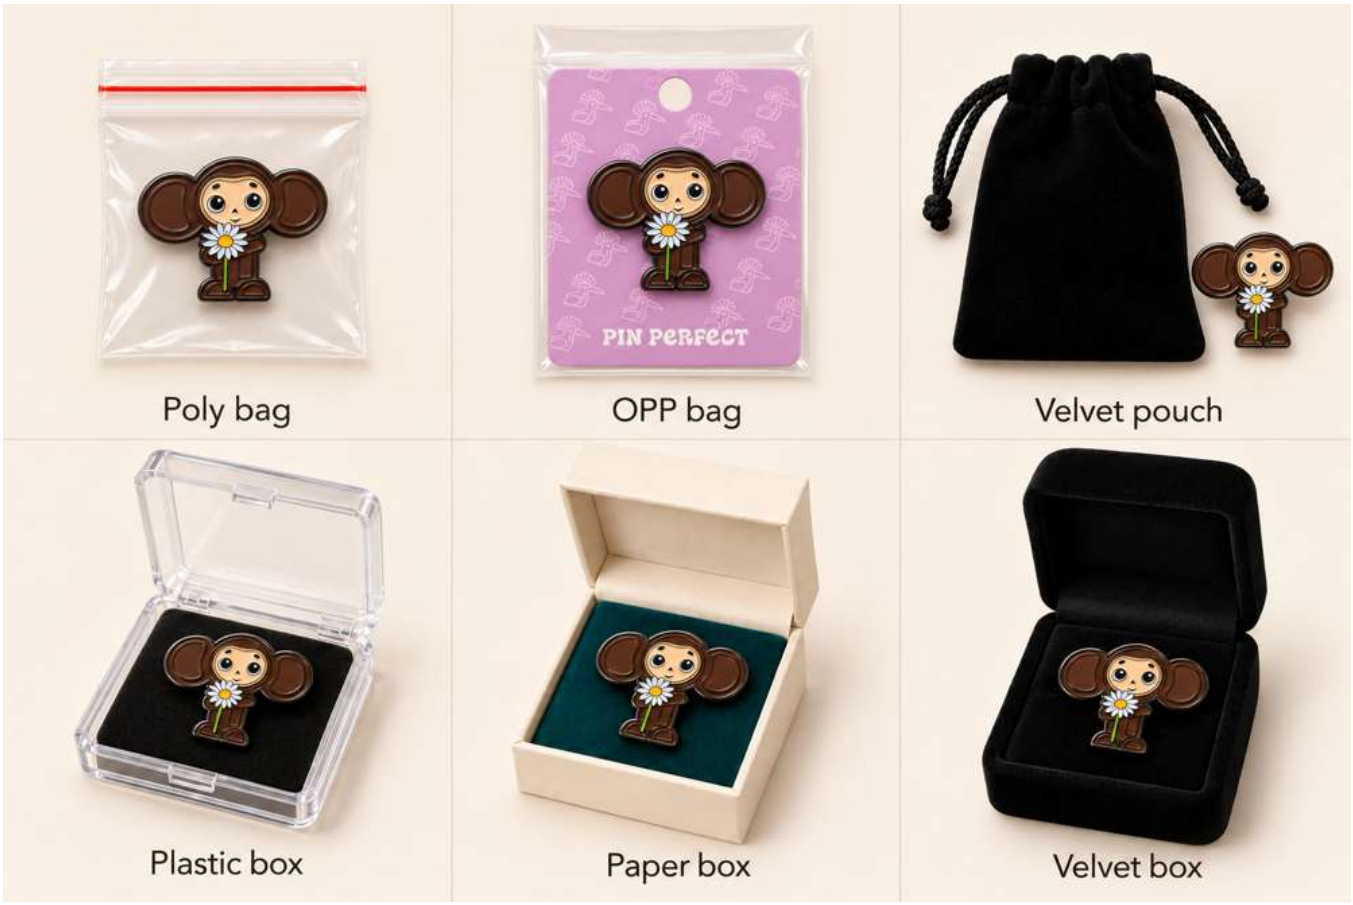

Magnet
A non-piercing magnetic fastening with a separate garment keeper. Review grip through your intended fabric.

Safety pin
A hinged brooch-style mechanism across the back. Confirm orientation and closing clearance.

Stick pin
A long needle with a protective end cap. Confirm length, orientation and packaging clearance.

Packaging

AI-edited Cheburashka design illustrations for comparison, not factory proofs or calibrated swatches. Confirm appearance and construction in your sample.

Poly bag
A flexible clear bag around the pin. Confirm closure type, size and whether a backing card is included.

Velvet pouch
A soft drawstring presentation pouch. Specify size, color and any requested branding.

Paper box
A paperboard presentation box with a fitted insert. Specify box size, colors and any printed artwork.

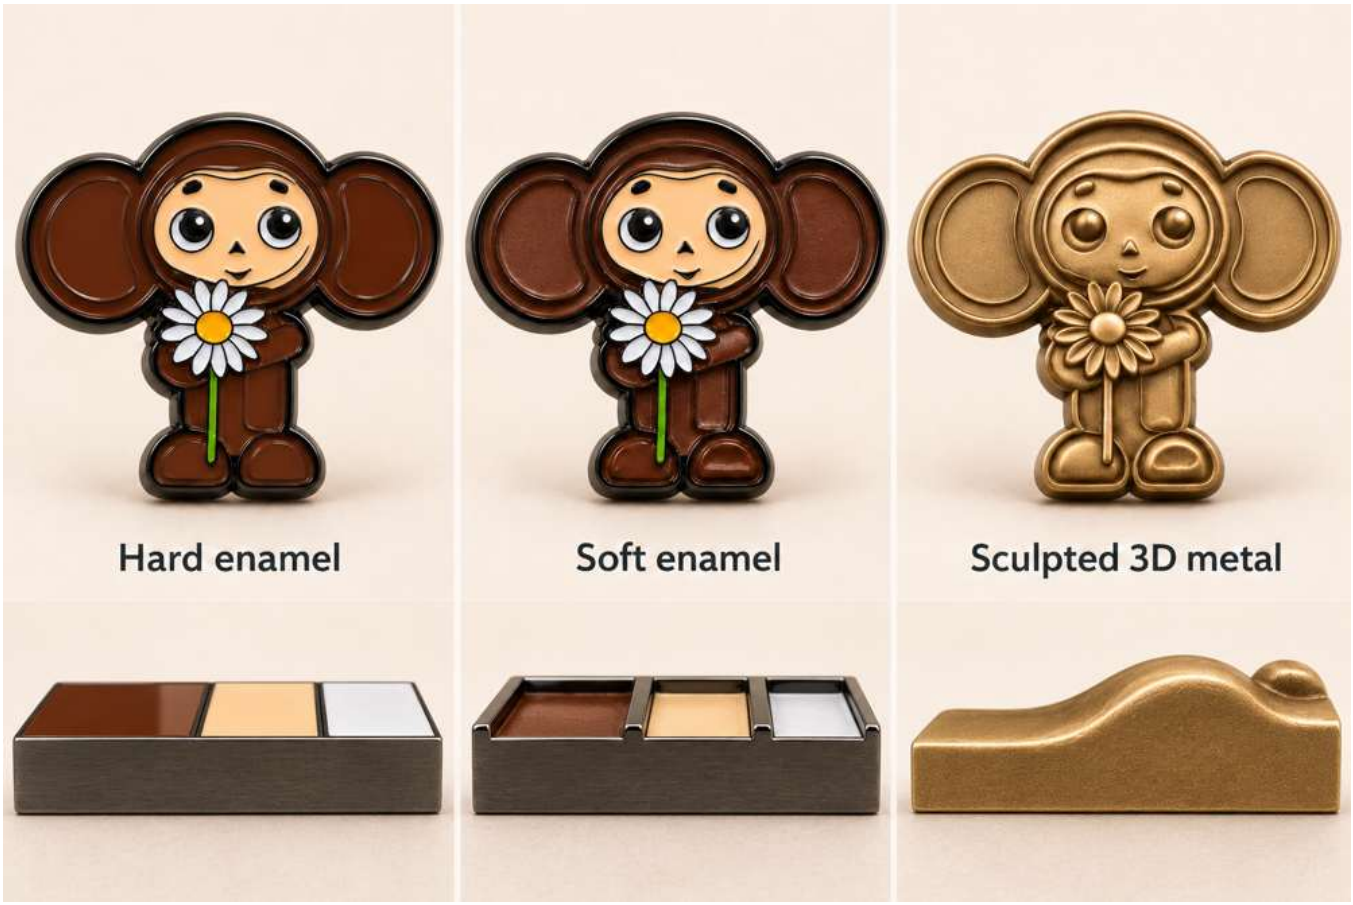

OPP bag
A crisp clear film bag, often specified with a flap. Confirm bag construction and any backing card separately.

Plastic box
A rigid presentation box. Confirm insert, closure and clearance for the attachment.

Velvet box
A structured velvet-covered presentation box. Confirm insert fit and the open and closed appearance.

Enamel surface and 3D relief

AI-edited Cheburashka design illustrations for comparison, not factory proofs or calibrated swatches. Confirm appearance and construction in your sample.

Hard enamel
Generally smooth, flush color-filled face beside the metal outlines.

Soft enamel
Recessed color below raised metal separators creates a textured face.

Sculpted 3D metal
Physical raised and rounded contours. Send a front view plus an angled or side reference.

Confirm the combination
Metal finish, enamel, 3D relief and special effects are separate specification choices. Not every combination suits every design.

For a 3D design, mark what rises, recesses or rounds over. Confirm thickness, relief depth, cutouts and attachments. Review the back and an angled sample photo or video.

Pin options specification worksheet

Complete one sheet for each design. Record undecided choices for discussion.

Project name / artwork version

_____

Quantity per design / required in-hand date

_____

Finished width × height / thickness

_____

Metal finish and sheen / areas of second finish

_____

Enamel style / color references

_____

3D relief, moving elements or special effects

_____

Attachment / post count / positions / orientation

_____

Packaging / backing card / insert / branding

_____

Quote reference / proof version / sample reference

_____

Open questions / changes required

_____

Before production: confirm the written quotation, exact finish combination, front/back/angled sample views and final approval record.
